#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-5 and 10-14 are rejected under 35 U.S.C. 102(a) as being anticipated by H.T. Whelan et al., "Protection Against Methanol-induced Retinal Toxicity by LED Photostimulation," Ophthalmic Technologies XII 461 1-239-246, 2002. Whelan et al. teach a method for restoration of retinal functionality by exposure to light. Exposure was performed using 670 nanometer radiation from an LED with an exposure time of 104 seconds at an intensity of 50 mW/cm² and a fluence of 4 J/cm². An electroretinogram was used to measure (observe) the visual function (abstract).

#### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 10/758,793 Page 3

Art Unit: 3739

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Whelan et al. as applied to claim 1 above, and further in view of Rosner et al., "Dose and Temporal Parameters in Delaying Injured Optic Nerve Degeneration by Low-energy Laser Irradiation," Laser Surgery Med. 13:61 1-617, 1993. Whelan et al. are discussed above, but do not teach intervals between treatments. Rosner et al. teach the use of low energy laser radiation to delay the degeneration of injured optic nerves. The wavelength of the He-Ne laser is 632.8 nanometers and the treatments are disclosed as once a day (every 24 hours) for 14 consecutive days (abstract). It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the treatment intervals as taught by Rosner et al. in the methods of Whelan et al. as both are treating related injury or damage. It is proper to take into consideration not only the teachings of the prior art, but also the level of ordinary skill in the art. In re Luck, 476 F.2d 650, 177 USPQ 523 (CCPA 1973). Specifically, those of ordinary skill in the art are presumed to have some knowledge of the art apart from what is expressly disclosed in the references. In re Jacoby, 309 F.2d 513, 135 USPQ 317 (CCPA 1962).

### Allowable Subject Matter

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Conclusion

Application/Control Number: 10/758,793 Page 4
